DETAILED ACTION

Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance or after an Office action under *Ex Parte Quayle*, 25 USPQ 74, 453 O.G. 213 (Comm'r Pat. 1935). Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114. Applicant's submission filed on 7/24/06 has been entered.

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

The application has been amended as follows: Cancel claims 1, 2, 8, and 9.

Allowable Subject Matter

The following is an examiner's statement of reasons for allowance: Pertaining to claim 3, the prior art does not teach nor suggest the following: A method of manufacturing a thin film transistor array substrate, comprising:

Art Unit: 2823

forming using a first mask process, a gate electrode of the thin film transistor on the substrate, a gate line connected to the gate electrode, a gate pattern including the gate pad connected to the gate line;

forming a gate insulation film on the substrate where the gate pattern is formed;

forming using a second mask process a source electrode and a drain electrode of the thin film transistor on the gate insulation film, a data line connected to the source electrode, a data pad connected to the data line, a source/drain pattern including a storage electrode in the region superimposed with the gate line, and a semiconductor pattern formed corresponding to the source/drain pattern ; and

forming using a third mask process a pixel electrode connected to the drain electrode and the storage electrode, a gate pad protection electrode formed to cover the gate pad, a transparent electrode pattern including the data pad protection electrode formed to cover the data pad, and a gate insulation pattern and a protection film pattern stacked in the a region other than the region where the transparent electrode pattern is formed.

Particularly, the present Application is allowable over the prior art submitted by the Applicants in the information disclosure statement filed 7/24/06 because the Bosch reference teaches the pixel electrodes being formed during the first masking step, while the present application teaches that the pixel electrodes are formed in the third masking step.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

Art Unit: 2823

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
